

T3 ADVISORS

Venezuela Investment Portfolio

Pre-NDA Opportunity Overview · April 2026

T3 Advisors identifies, structures, and intermediates investment opportunities in Venezuela across six verticals: Tourism & Hospitality, Agribusiness, Industrial & Manufacturing, Real Estate, Healthcare, and Mining. The opportunities presented below are in anonymized format. Asset identity, precise location, and full documentation — including financial statements, technical studies, and transaction structure — are delivered upon execution of a bilateral NDA.

If any opportunity in this document matches your investment mandate, contact us directly. We will send you a mutual NDA and, upon signing, the complete dossier for the asset of interest: identity, precise location, financial documentation, and transaction structure.

About T3 Advisors

T3 Advisors is a transactional advisory firm headquartered in Venezuela, focused on connecting international and local capital with productive assets across the country's key sectors. We act as an in-market transactional counterpart: we identify opportunities, produce institutional-grade documentation, and coordinate every phase of the process, from initial presentation and NDA through due diligence management and closing.

Our role is coordination, not substitution. Each transaction is supported by a strategic partner network assembled around the specific needs of the deal: OFAC and sanctions counsel, local attorneys, independent auditors, certified appraisers, and technical or environmental experts. Investors who work with T3 gain not only deal flow, but the operational infrastructure and professional network required to evaluate, structure, and close transactions in a complex market.

Venezuela presents a significant information asymmetry: productive assets and motivated sellers exist, but are not identifiable through conventional channels. T3 bridges that gap and manages the process once it is closed.

INVESTMENT VERTICAL

Tourism & Hospitality

Hotels, resorts, and experiential hospitality across Caribbean, Andean, and urban destinations.

OPPORTUNITY	ESTIMATED INVESTMENT	LOCATION	OPPORTUNITY DESCRIPTION	INVESTMENT THESIS
Ultra-Luxury Eco-Glamping with Wellness Center CAPITAL RAISE	USD 5M – USD 10M	Caribbean coast, adjacent to protected marine area	32-unit eco-glamping resort on 45 hectares of Caribbean coastline bordering a national marine park. November 2025 feasibility study sets breakeven at 28.8% occupancy. Development cost runs USD 219,000 per key, compared with USD 500,000 to USD 1,000,000 per key in the established luxury Caribbean. Asset operates under a global lifestyle hospitality brand within the Ennismore/Accor portfolio, one of ten resorts in that brand's worldwide network.	Venezuelan construction economics deliver international nightly rates at a fraction of Caribbean CAPEX, with the global operator already confirmed as brand partner. The signed brand commitment closes the credibility gap that typically blocks institutional capital in frontier hospitality markets.
Luxury Boutique Inn on Private Cay CAPITAL RAISE	Under USD 500K	Los Roques Archipelago, National Park	Six-unit boutique posada on a private cay in Los Roques, the highest-ADR beach destination in Venezuela. Construction stands at 70% complete, with six structures erected and finishing work pending. Entry is USD 250,000 for 25% equity on a USD 1M pre-money valuation; premium posadas in the archipelago generate USD 300,000 to USD 800,000 in annual revenue once operational. The cay includes its own dock and independent utilities, physically separated from the main settlement.	New construction in Los Roques has been prohibited since 2004 under a carrying-capacity regulation. If permits hold, this is one of the last posadas that can legally exist in the archipelago. Entering at 70% completion bypasses the permitting and structural phases, where execution risk concentrates.
Super-Luxury Boutique Hotel Project SALE	USD 12M – USD 20M	Las Mercedes, Caracas	150-key super-luxury hotel project with 18,377 sqm of built structure on a triangular lot in Caracas's premier dining and luxury retail district. Structure is complete; interior finishing and fit-out remain pending. Pricing works out to USD 100,000 per key, compared with USD 250,000 to USD 400,000 per key for new-build luxury hotels in Latin America. No boutique five-star hotel currently operates in this district or elsewhere in Caracas.	Acquisition of a completed structure at one-third the regional build cost per key, in the only major South American capital without an international boutique brand. Marriott already operates two hotels in Caracas while Hilton runs more than 300 properties across Latin America and the Caribbean with zero in Venezuela, leaving open-category whitespace for the first boutique entrant.

OPPORTUNITY	ESTIMATED INVESTMENT	LOCATION	OPPORTUNITY DESCRIPTION	INVESTMENT THESIS
Operational 5-Star Hotel on the Central Coast SALE	USD 12M – USD 15M	Central Coast, Venezuela (near the main international airport)	126-key, five-star beachfront hotel on Venezuela's Central Coast, 20 minutes from the main international airport and 40 minutes from Caracas. Operating today with continuous guest flow, distribution across international reservation platforms, and complete pool, F&B, and events infrastructure. Sits within a Special Economic Zone carrying up to 15 years of income tax exemption. At the estimated negotiated price, pricing works out to USD 95,000 to USD 119,000 per key, against USD 301,000 per key in recent Caribbean hotel transactions.	The asset has been on the market for more than six years, opening negotiation room that could bring the per-key cost to one-third of the Caribbean benchmark. Government reconstruction of two flagship hotels in the same coastal zone temporarily limits competing new supply while channeling public capital into destination infrastructure.
Large-Scale Beachfront All-Inclusive Resort SALE	USD 15M – USD 25M	Margarita Island	405-key all-inclusive resort on 28 acres of direct Caribbean beachfront, with more than 25 years of continuous operation including seven years under a European hotel chain with direct charter service. Pricing works out to USD 30,000 to USD 35,000 per key, against USD 127,000 to USD 136,000 paid in recent Caribbean all-inclusive transactions. Half the site remains undeveloped, with base infrastructure already installed for future expansion.	Per-key pricing runs four times below recent Caribbean comparables for an asset with an established European operator track record. Hesperia World, MSC Cruises, and Avianca each announced commitments to Margarita Island in 2026, which should compress the country-risk discount embedded in current pricing.
5-Star Urban Hotel in the Premier Financial District SALE	USD 15M – USD 25M	Eastern Financial District, Caracas	212-key, five-star hotel with 36,460 sqm of built area on a seismically certified structure facing the city's most prominent plaza. Infrastructure includes 12 elevators, a 1,000 KVA power plant, and a two-million-liter water reserve. Per-key pricing runs USD 71,000 to USD 118,000, while new-build urban luxury in Latin America costs USD 150,000 to USD 350,000 per key. No available parcels remain in the immediate zone for competing hotel development.	The seller has been unable to close a transaction in years, and the January 2026 listing dropped the asking price for the first time, a concrete signal of openness to negotiate into the indicated range. Marriott operates two hotels in Caracas; Hilton, IHG, and Accor have none. A pre-signed management agreement with any of them would add structural value to the asset.
Large-Scale Caribbean Resort with Coastal Frontage SALE	USD 15M – USD 25M	Margarita Island	409-key resort complex on 123 hectares with 1.2 km of continuous Caribbean beachfront, laid out in four phases with two six-story hotel buildings. Currently non-operational; full rehabilitation required. Pricing equates to USD 49,000 per key including 54 undeveloped hectares, against USD 200,000 to USD 300,000 per key for operating Caribbean resorts. The only resort-scale property on the island with more than one kilometer of continuous beachfront.	Land value prices at USD 16 per sqm against USD 522 per sqm paid for the Grand Lucayan in the Bahamas; the gap reflects years of abandonment that have deterred every buyer class except turnaround specialists. A phased rehabilitation starting with one 200-key hotel at USD 3M to USD 6M in CAPEX allows market validation before committing capital to the full complex.

OPPORTUNITY	ESTIMATED INVESTMENT	LOCATION	OPPORTUNITY DESCRIPTION	INVESTMENT THESIS
Historic Building for Boutique Hotel Conversion SALE	USD 3M – USD 5M	Eastern Financial District, Caracas	1945 art deco building with 3,000 sqm of built area on a 1,500 sqm lot, dual street access, and a metro station at the doorstep. Zoning allows up to 20 stories on the existing footprint. Pricing runs USD 1,233 per sqm of built area, against USD 1,500 to USD 3,000 per sqm for new hotel construction in Latin America. The only art deco structure with dual frontage in the city's premier financial zone.	At USD 3.7M, the acquisition price sits below the land value alone in a district where residential prices average USD 1,465 per sqm, and the buyer captures 3,000 sqm of built structure whose replacement cost runs multiples of the deal size. Caracas has zero boutique hotels in its financial district; the only nearby comparable (47 keys) has held sustained occupancy for years.
Operational Urban Hotel in Caracas Financial District SALE	USD 2.5M – USD 4M	Eastern Financial District, Caracas	76-key, 12-story concrete-frame hotel in Caracas's eastern financial district, with ground-floor commercial tenants providing independent income. Operates as a three-star hotel with active bookings, within walking distance of a Line 1 metro station at the city's diplomatic and commercial core. Pricing works out to USD 39,000 per key, against USD 125,000 per key paid in the only comparable recent Caracas hotel transaction (2022). The building bundles hotel revenue and commercial rent in a single asset.	Asking price of USD 3M for a 12-story building implies USD 938 per sqm, a 36% discount to the average residential price in the same zone. The check size fits a single investor or a group of two to three, widening the buyer pool well beyond the USD 15M to USD 50M hotels elsewhere in the portfolio.
Apart-Hotel Vacation Resort SALE	USD 15M – USD 25M	Margarita Island	96-unit apart-hotel with full apartments (kitchen, dining, two to three bedrooms each), operational and distributed across major international reservation platforms. Pricing runs USD 1,933 per sqm across 12,931 sqm of built area, against USD 3,000 to USD 5,000 per sqm for four-star Caribbean construction. The 96 units are legally autonomous and can be sold individually, leased, or run as centrally managed hotel inventory.	The asset has been listed for more than four years, opening meaningful negotiation room below the asking price. The apart-hotel format allows unit-by-unit sale to Venezuelan diaspora investors, with potential to recover the full acquisition cost through fractional sales before maximizing the hotel business.
5-Star Hotel Development with International Brand SALE OR JOINT VENTURE	USD 8M – USD 15M	Caracas Metropolitan Area	212-key, five-star hotel project with an active international brand franchise in place, including land, permits, and construction underway. Joint venture entry starts at USD 8M; full acquisition starts at USD 15M. Per-key pricing runs USD 71,000, against USD 100,000 to USD 300,000 for five-star development in Latin America. Dual-format design combines conventional hotel rooms and apart-suites in a single complex.	The franchise operator expanded into Argentina, Ecuador, Colombia, and Panama during 2025; if the agreement remains active, the buyer inherits international brand access with no further negotiation. JV entry at USD 8M allows three to four investors to participate at USD 2M to USD 3M each, with a branded five-star hotel project as the underlying asset.

TOURISM & HOSPITALITY • CONTINUED

OPPORTUNITY	ESTIMATED INVESTMENT	LOCATION	OPPORTUNITY DESCRIPTION	INVESTMENT THESIS
Mountain Resort with Vacation Ownership Platform SALE	USD 9M – USD 13M	Venezuelan Andes, established mountain tourism destination	187-key mountain resort on 2.72 hectares with convention center, certified chapel, and recreational areas, operating continuously for 27 years. Active RCI Gold Crown affiliation, bookable today through the Armed Forces Vacation Club at USD 359 per week. Per-key pricing runs USD 59,000, against USD 150,000 to USD 300,000 for comparable four-star mountain resorts in Colombia. Inventory of more than 7,000 unsold timeshare rights carries a conservative valuation of USD 14M to USD 35M, a figure that alone exceeds the full asking price.	The 7,000-plus unsold timeshare rights plug directly into RCI's network of 4,000 resorts and 1.5 million members, a pre-installed revenue engine. At USD 2,000 to USD 5,000 per right, the inventory alone could return 1.3x to 3.2x the acquisition cost. Travel+Leisure Co. (RCI's parent) acquired Accor Vacation Club for USD 48M in 2024, the most recent institutional transaction for inventory already integrated into the RCI system.
All-Inclusive Resort with Semi-Private Beach SALE	USD 4.5M – USD 7.5M	Margarita Island, northern coast	220-key all-inclusive resort with two restaurants, four bars, pools, and event salon, accessing a semi-private beach shared only with its immediate neighbor. Per-key pricing runs USD 20,000 to USD 34,000, against USD 288,000 per key paid by Hyatt for Playa Hotels' Caribbean all-inclusive portfolio in 2025. Sits 300 meters from a large-format resort also on the market, creating a potential 625-key beachfront cluster.	Per-key pricing runs 8x to 14x below the Hyatt/Playa institutional benchmark; the asset sits in a market where country-risk pricing has not yet adjusted to the recent hotel investments announced for the island. Adjacency with the neighboring resort creates a consolidation play: a single buyer can assemble 625 keys on one semi-private beach for under USD 22M total.
Operational Boutique Hotel (Playa El Yaque) SALE	USD 5M – USD 7M	Playa El Yaque, Margarita Island	51-key, purpose-built hotel across three six-story modules with self-sufficient infrastructure: 167 kVA generator and 365,000-liter water reserve. Actively operating in Playa El Yaque, ranked among the top seven kitesurf destinations worldwide, with 91% to 98% wind probability from December through May. Per-key pricing runs USD 110,000, compared with USD 115,000 per key for a 26-key comparable in Cabarete, Dominican Republic. Autonomous infrastructure insulates the asset from intermittent public utilities.	Acquisition of a going concern with proven infrastructure and operations, not a speculative project. Playa El Yaque draws international kitesurfers independent of Venezuela's country perception because wind conditions are a function of geography, and European tour operators already sell packages targeted specifically to this beach.

INVESTMENT VERTICAL

Agribusiness

Crop platforms, processing, and agroindustrial operations with installed capacity and regulatory capital.

OPPORTUNITY	ESTIMATED INVESTMENT	LOCATION	OPPORTUNITY DESCRIPTION	INVESTMENT THESIS
Fine Criollo Cacao Industrial Platform CAPITAL RAISE	USD 5M – USD 10M	Traditional agricultural zone, west-central Venezuela	Agroforestry cacao operation on 300 hectares planted across three parcels, featuring eight criollo varieties accumulated over 20 years of clonal selection. Year one of planting; first cacao harvest arrives in six years, with plantain and avocado generating interim revenue. Fine-flavor cacao trades at USD 4,800 to USD 5,000 per MT, compared with under USD 3,100 per MT for bulk African commodity. Founded by an entrepreneur with a documented USD 400M-plus exit from a national telecommunications company.	The platform holds clones from all eight Venezuelan cacao-growing regions, a genetic library assembled over two decades that capital cannot relocate or accelerate. The agroforestry model produces plantain revenue from year one and internationally certifiable carbon credits, bridging the six-year gap to first cacao harvest.
Agroindustrial Platform with Own Brands and Installed Capacity CAPITAL RAISE	USD 2M – USD 4M	Traditional rice-growing region, west-central Venezuelan lowlands	Rice processing plant on 30,000 sqm, with two mills running real throughput of 560 MT/day, 17,520 MT of silo storage, and 30 years of continuous family operation. Includes an established retail rice brand with formal corporate dossier and active government registrations. Entry at USD 3M compares with the USD 32.9M paid by Camil for a comparable rice mill in Paraguay (2024). Chinese-manufactured equipment for rice derivatives is already imported and installed on site.	Regulated paddy prices have collapsed to USD 0.32 to USD 0.38 per kg against a USD 0.54 breakeven, making the pivot to unregulated derivatives (gluten-free flour, pasta, biochar) an operational necessity that the installed capacity can execute from day one. Rice husk biochar from 40,000 MT per year of throughput is certifiable for international carbon markets, with comparable regional programs generating USD 2.4M to USD 3.6M annually.
Productive Oil Palm Plantation with Stabilized Income CAPITAL RAISE	USD 1M – USD 2M	Venezuela	Productive oil palm plantation generating USD 400,000 to USD 500,000 in annual revenue, operated alongside a pharmaceutical distribution business with verified international credit lines. Asking price of USD 1.5M equates to 3.0x to 3.75x reported annual revenue, against 5x to 8x for comparable operating agricultural platforms in Latin America. The promoter has maintained active external financing through Venezuela's deepest economic crisis. Production sells into domestic industrial demand with no export dependency, generating dollar-denominated revenue insulated from currency conversion risk.	Venezuela imports 70% of its palm oil consumption, and this operation already generates USD 400,000 to USD 500,000 annually selling into that structural supply gap at an attractive revenue multiple. The government's Plan Palma Soberana (2022 to 2031) prioritizes palm oil self-sufficiency, and a domestic agricultural fund authorized by SUNAVAL in 2024 provides a regulated co-investment vehicle at this ticket size.

AGRIBUSINESS · CONTINUED

OPPORTUNITY	ESTIMATED INVESTMENT	LOCATION	OPPORTUNITY DESCRIPTION	INVESTMENT THESIS
Integrated Rum Distillery with Denomination of Origin SALE OR STRATEGIC INVESTMENT	Negotiable (eight figures)	Agroindustrial zone, northwestern Venezuela	Integrated rum distillery covering fermentation through bottling, with daily capacity of 10,500 liters and two aging cellars. More than 25 years of continuous operation, Denominacion de Origen Controlada Ron de Venezuela certification (held by only 12 national brands), and nine international medals including Double Gold at European and North American competitions. Two revenue lines: premium aged rum and pharmaceutical-grade anhydrous alcohol, a product manufactured by only two distilleries in the country. An August 2024 professional appraisal valued tangible assets at USD 9.5M; the asking price implies 1.6x appraised value, against 3x to 5x for comparable Caribbean spirits transactions.	The Denominacion de Origen certification requires decades of documented production history and cannot be accelerated by capital. Dual revenue streams, premium rum at 25%-plus margins and pharmaceutical alcohol, provide income stability independent of export cycles.
Integrated Sugar Processing Complex SALE	Negotiable	Central Venezuela, within 100 km of the main seaport	Sugar processing complex on 22.6 hectares, with 200 MT/day refining capacity operational, 6,000 MT/day cane milling in installation stage, and 5,000 KVA of self-generation. More than a century of history as a sugar facility; current owners funded partial rehabilitation from a post-abandonment state. Realistic range of USD 5M to USD 15M benchmarks against a foreign consortium's USD 158M investment covering three comparable central reactivations. Sits 60 km from the main seaport, enabling dual-season operation: cane milling during harvest and imported raw sugar refining year-round.	A 24-percentage-point tariff shield on refined sugar imports makes domestic refining structurally profitable, and this is the only private central with direct seaport logistics for year-round raw import processing. Only 6 of Venezuela's 16 private centrals are operational, and a Caribbean refinery JV recently sold for USD 20M, providing a direct reference point for replacement cost.

AGRIBUSINESS · CONTINUED

OPPORTUNITY	ESTIMATED INVESTMENT	LOCATION	OPPORTUNITY DESCRIPTION	INVESTMENT THESIS
Coffee Roasting Plant with Own Brand SALE	Under USD 1M	Central Venezuela	Coffee roasting plant in a 750 sqm industrial facility, with two 120 kg industrial roasters, densimetric sorter at 2,400 kg/hour, 100 MT/month capacity, and 17 years of operation. Reports USD 1.62M in annual revenue and USD 500K net income (unaudited). Asking price of USD 850K implies 1.7x declared net income, against 8x to 9x EBITDA for comparable roasters in normalized markets. Registered brand with established direct sourcing from arabica growers in Lara state.	With more than 440 coffee brands in Venezuela and fewer than 10 industrial roasters, this plant sits on the bottleneck side of a supply-demand imbalance that the 55% production surge of 2025 will only widen. The asking price covers only the critical equipment; replacement value of the two industrial roasters plus the full processing line alone exceeds the total purchase price.
Coffee Processing Plant SALE	USD 3.5M – USD 4.5M	Venezuela, within 30 km of the capital	Coffee processing plant on 2,511 sqm in an industrial zone, with imported roasting and milling equipment, 600 MT of storage capacity, and more than 2,000 coffee trees on the property. Turnkey sale including land, buildings, machinery, and operating permits. Pricing of USD 3.9M for 2,511 sqm of processing infrastructure with 600 MT of storage compares with USD 5M to USD 8M and 18 to 24 months to build an equivalent facility from scratch. Sits 25 km from Caracas, the country's largest consumer market of six million people.	A major Venezuelan conglomerate entered coffee production in March 2026 and a Colombian food group tripled its Venezuelan exports, both requiring local processing capacity that takes 18 to 24 months to build. This plant offers that capacity already permitted and 25 km from the country's largest consumer market, positioning it as a natural acquisition target for any regional player seeking a fast operational landing.
Meat Processing and Slaughter Plant SALE	USD 5M – USD 8M (indicative)	Miranda State, adjacent to the capital	Industrial slaughterhouse and meat processing plant, with 22,216 sqm built on a 33,215 sqm lot, capacity for 400 head/day slaughter and 100 head/day deboning, cold storage exceeding 97 MT, and 34 years of continuous operation. Self-sufficient infrastructure: dedicated well, 700 kVA generator, 100 HP boiler, and on-site wastewater treatment plant. Specialized industrial floor prices at USD 270 per sqm, against USD 800 to USD 1,500 per sqm for comparable construction across the region. An additional 10,999 sqm (33% of the lot) remains undeveloped for future expansion.	Thirty-four years of continuous operation through Venezuela's worst economic crises demonstrates a level of operational autonomy that no greenfield project can replicate on day one. Colombian cattle exports to Venezuela are resuming, and multiple unsolicited inquiries for this specific plant have already reached the broker.

AGRIBUSINESS · CONTINUED

OPPORTUNITY	ESTIMATED INVESTMENT	LOCATION	OPPORTUNITY DESCRIPTION	INVESTMENT THESIS
Tropical Fruit Processing Agroindustrial Complex SALE	USD 12M – USD 18M	Northern coastal zone, Venezuela	Diversified agroindustrial complex on 1,731 hectares: fruit pulping plant equipped with European aseptic technology (240 MT/day capacity), 12,000 MT of cold storage, 300 hectares of mango (more than 13,000 trees), a dairy operation producing 1,400 kg/day of cheese, and a cattle herd. Self-sufficient enclave with own power generation, gas compressor plant, water wells producing 56 liters/second, airstrip, and housing for more than 50 worker families; founded in 1970. Asking price of USD 15M compares with USD 117M in assets declared by the seller (unaudited). Current revenue of USD 1.2M per year sits against an estimated USD 11.5M potential at full capacity utilization.	The complex runs at roughly 10% of installed processing capacity; revenue growth comes from activating existing equipment rather than building new infrastructure. European aseptic processing equipment at this scale is not available on the Latin American secondary market; replacement would require direct import and multi-year installation, a barrier to entry that capital cannot shortcut.
Grain Processing and Packaging Plant SALE	USD 2M – USD 3M	Lara State, west-central Venezuela	Rice processing plant on 9,000 sqm, with four 1,000 sqm industrial bays, full-cycle capacity (drying, hulling, polishing, packaging) of 45,000 MT per year, an 80 MT truck scale, and a quality control laboratory. Active SUNAGRO, MINPAL, and INSAI licenses enable domestic sales, import, and export. Pricing works out to USD 49 per MT of annual installed capacity, against USD 183 per MT paid by Camil for a comparable mill in Paraguay. Two registered brands with existing retail distribution.	The SUNAGRO, MINPAL, and INSAI licenses bundled with the plant take years and substantial cost to secure independently; the buyer captures regulatory access to produce, import, and export from day one. Diversification into unregulated rice derivatives (gluten-free flour, rice pasta) unlocks margins several times higher than price-controlled white rice, using the same installed milling and packaging equipment.
Multi-Product Industrial Packaging Plant SALE	USD 3M – USD 5M	Aragua State, central industrial corridor, Venezuela	Industrial packaging plant with 2,986 sqm built on a 3,343 sqm lot (89% coverage ratio), featuring nine automatic volumetric packers, five banders, and four industrial printers, for theoretical throughput of 162 to 216 MT/day. Sits on the central industrial corridor where Venezuela's leading food manufacturers operate. Comparable industrial buildings in the area trade at USD 76 to USD 150 per sqm without equipment; this facility includes a full packaging line at those same levels. Each packer is manufacturer-rated for sugar, cereals, legumes, oats, and any free-flowing product.	Multi-product capability keeps the buyer from being locked into a single input, and any food manufacturer on the corridor lacking in-house capacity becomes a potential client or acquirer. A major sugar central produces 120,000 MT per year but has no packaging footprint near the capital; this plant offers inland producers a distribution node 90 minutes from Caracas.

INVESTMENT VERTICAL

Industrial & Manufacturing

Operational manufacturing platforms with decades of track record and defensible market positions.

OPPORTUNITY	ESTIMATED INVESTMENT	LOCATION	OPPORTUNITY DESCRIPTION	INVESTMENT THESIS
Disposable Diaper and Personal Hygiene Manufacturing Plant CAPITAL RAISE	USD 5M – USD 8M	Central Region, Venezuela	Manufacturer of disposable diapers, wet wipes, and baby cosmetics across two international production lines, with 4,836 sqm built on a 6,120 sqm lot and capacity of 14 million diapers per month. More than 30 years of continuous operation at 71% utilization (10 million of 14 million monthly units). Investment sought of USD 6.3M compares with USD 5M to USD 13M in estimated replacement cost for the production lines alone. Five product categories (diapers, wipes, baby cosmetics, postpartum towels, incontinence) sit on a single manufacturing platform.	Entry captures 29% idle capacity (four million diapers per month) activatable without additional machinery CAPEX, producing incremental revenue from month one. A comparable greenfield diaper plant was budgeted at USD 27M in June 2025; this operating platform at equivalent capacity requires less than half that investment.
Water Pump Manufacturing Plant with Integrated Foundry SALE	USD 4M – USD 7M	Central Industrial Zone, Venezuela	Manufacturer of water pumps from 1 HP to 200 HP, with more than 600 aluminum models and an integrated foundry running two induction furnaces, on 20,000 sqm total with 8,000 sqm of buildings. 72 years of continuous operation, 51 employees, more than 800 distributors, and presence in national hardware chains. Industrial floor prices at USD 250 per sqm against USD 500 to USD 750 per sqm for greenfield equivalent without equipment. Only pump manufacturer in Venezuela with its own foundry, covering casting through finished product.	Franklin Electric paid multiples above USD 5M for Barnes de Colombia in 2025 specifically for its manufacturing and foundry capabilities; this plant offers the same integration in an adjacent market with zero major-brand competition. The 72-year distribution network of more than 500 active clients and national retail presence would take decades for a new entrant to assemble.
Food Manufacturing Plant with 100+ Active Health Registrations SALE	USD 1.5M – USD 2.5M	Distrito Capital, Venezuela	Manufacturer of jams, gelatin, syrups, sauces, and tomato paste across more than 40 active products, in a 3,700 sqm industrial building with 30 workers and two proprietary branded product lines. More than 75 years of continuous operation with national supermarket distribution. Asking price of USD 1.9M on USD 2.4M in declared sales implies 0.79x revenue, against 1.5x to 3x revenue for comparable Latin American food manufacturers. More than 100 active health registrations, of which roughly 60 are dormant and activatable without new permitting.	Each health registration in Venezuela takes 6 to 12 months to obtain; this transaction captures 30 to 60 years of accumulated regulatory capital in a single purchase. Nutresa tripled its exports to Venezuela in 2026, Mack de Venezuela acquired Tio Rico from Unilever in July 2025, and Polar bought two Colombian plants in April 2025, confirming that food manufacturers in this geography are being actively consolidated by regional players.

INDUSTRIAL & MANUFACTURING · CONTINUED

OPPORTUNITY	ESTIMATED INVESTMENT	LOCATION	OPPORTUNITY DESCRIPTION	INVESTMENT THESIS
Pharmaceutical Laboratory with 50+ Years of Regulatory Capital SALE	USD 4M – USD 7M	Caracas, Venezuela	Pharmaceutical laboratory for liquid products, with more than 30 registered products, two automated filling lines running 2,500 and 4,200 bottles per hour, and a 1,500 sqm owned facility with GMP-compliant clean rooms. More than 50 years of continuous operation through hyperinflation, pandemic, and sanctions. Asking price of USD 5M on USD 3M in declared sales implies 1.67x revenue, against 3x to 8x revenue for pharma labs in emerging markets. Active manufacturing agreements with two international pharmaceutical companies supply 14 imported generic products.	Replicating the 30-plus health registrations, GMP certification, and drugstore codifications from scratch takes 3 to 4 years and comparable capital, with no guarantee of regulatory approval. Megalabs (Uruguay) grew its Venezuelan workforce 32.6% year-over-year without a local manufacturing plant, and GEROPHARM (Russia) invested EUR 21.5M in Venezuelan pharma production in 2025, concrete signals that foreign laboratories are actively seeking this type of installed capacity.
Water Filtration and Purification Company SALE	USD 1M – USD 2M (separable inventory)	Caracas, Venezuela	Company producing water filtration and purification systems for residential, corporate, industrial, and government segments, with four retail locations in premium shopping centers, 22 employees, and an assembly plant in Caracas. More than 55 years of continuous operation, with brand-awareness studies documenting national leadership. Pricing of USD 900K for the enterprise plus USD 650K for inventory implies 2.8x on USD 320K in annual revenue. The only nationally recognized water filtration brand in Venezuela, with no identified competitor of equivalent scale or retail presence.	Acquisition of the only established platform (brand, four retail stores, technical network) to serve a 30-million-person market where piped water infrastructure has accumulated more than 40 years of deterioration. At USD 900K, the entry price sits below the cost of assembling a single comparable retail presence in premium shopping centers, limiting downside to a fraction of the brand's replacement value.
Tempered Glass and Windshield Manufacturing Plant SALE	USD 10M – USD 12M	Central Industrial Zone, Venezuela	Tempered glass and windshield manufacturing plant, 28,000 sqm across three plants, with five tempering furnaces imported from the United States. More than 60 years of continuous operation, UNE 12543 certified, with ion-bombardment solar control glass technology. Industrial floor prices at USD 400 to USD 480 per sqm, against USD 800-plus per sqm for greenfield equivalent. Near-monopoly position in tempered and laminated glass at the national level, with the only state competitor operating below capacity.	Car sales grew 120% in 2025 to 38,610 units while the state competitor runs underutilized, concentrating market demand on this private operator. Dual exposure to automotive and construction provides a natural cycle hedge in a supply-constrained market with no viable new entrants in the near term.

INDUSTRIAL & MANUFACTURING • CONTINUED

OPPORTUNITY	ESTIMATED INVESTMENT	LOCATION	OPPORTUNITY DESCRIPTION	INVESTMENT THESIS
Galvanized Steel Roofing and Profile Manufacturer SALE	USD 4M – USD 7M	Venezuela	Manufacturer of galvanized steel roofing sheets and profiles across seven product lines (corrugated, trapezoidal, decking, flat sheet, longitudinal slit coil), with roll forming and slitting equipment and 20 workers. Reports USD 10M in declared annual revenue, equating to USD 500K per worker per year in a highly mechanized operation. Pricing implies 0.5x annual revenue, against 0.8x to 2.0x for industrial manufacturers in normal markets. Product catalog includes structural decking for modern steel-frame construction, extending beyond basic roofing into higher-margin segments.	Acquisition of a USD 10M-revenue operation at 0.5x sales, below the USD 6M declared asset value, in a market where the only integrated steel producer operates below 20% capacity and forces dependence on coil importers and processors. Twenty workers generating USD 10M in revenue reflects a capital-light model; the operation scales with demand, not headcount.
Condiments and Sauces Manufacturing Plant SALE	USD 2M – USD 4M	Central Industrial Corridor, Venezuela	Manufacturer of mayonnaise, ketchup, tomato sauce, and dressings across six automated Italian production lines, on 8,314 sqm of land with 6,726 sqm built, at roughly 6,000 cases per shift. Confirmed operational in 2025, with epoxy-resin floors and stainless-steel mixing infrastructure. Pricing works out to USD 337 per sqm of land or USD 416 per sqm built, against USD 600-plus per sqm for greenfield food-grade industrial. Includes three registered trademarks and patented formulas for every product.	The price captures six automated production lines, patented formulas, and registered brands at a per-square-meter cost below an empty industrial shell, eliminating one to two years of greenfield development and permitting. Nine active mayonnaise exporters operate in Venezuela, with at least one generating USD 50M to USD 100M in annual revenue, confirming domestic scale and established export channels in the sector.
Diversified Metallurgical Industrial Platform SALE	USD 25M – USD 40M	Venezuela	Diversified metallurgical platform in wire, galvanized products, highway infrastructure, and storage solutions, with more than 15 product lines across four plants totaling 46,000 sqm of built area. More than 70 years of continuous operation serving agriculture, construction, government infrastructure, and industrial sectors. Asking price of USD 25M compares with USD 23M to USD 37M in estimated replacement cost for physical structures alone, excluding machinery, land, and brand. Hot-dip galvanization service for third parties runs as an independent revenue line alongside in-house manufacturing.	Bekaert sold Vicson (Venezuela), together with its Costa Rica and Ecuador operations, to Grupo AG for USD 73M at 0.53x revenue in July 2025, the most recent comparable transaction for a metallurgical platform in this geography. Grupo AG, already operating in Venezuela, is the natural consolidator for the complementary product lines (highway barriers, culverts, modular panels) this platform brings.

IV

Real Estate

Commercial buildings, office towers, and coastal land with structural positioning and distressed pricing.

OPPORTUNITY	ESTIMATED INVESTMENT	LOCATION	OPPORTUNITY DESCRIPTION	INVESTMENT THESIS
Pristine Virgin Caribbean Coastal Mega-Land SALE	Over USD 100M	Margarita Island, Nueva Esparta State, Venezuela	8,979-hectare private landholding with 22 km of virgin Caribbean coastline, equivalent to 50% of Aruba's total land area. Held by the same family group since 1925, with a professional appraisal completed in January 2026 valuing the property at USD 151.6M. Pricing equates to USD 1.69 per sqm, against USD 50 to USD 200 per sqm for undeveloped coastal parcels in Turks & Caicos and Exuma. 84% of the land falls under National Park and Wildlife Reserve designation, restricting development to eco-luxury tourism.	One of the largest privately held Caribbean coastal properties, trading at a fraction per sqm of any comparable island landmass because the ownership group spent decades unable to align on a sale. All shareholders have now signed a unified sale authorization for the first time, creating a window that closes in August 2026.
Full Building in Premium Corporate Corridor SALE	USD 3M – USD 5M	Altamira/La Castellana Corridor, East Caracas	Five-story mixed-use building with 1,221 sqm of construction, eight garage bays, and a panoramic glass facade, within walking distance of the district's main plaza and Metro Line 1. Listed since May 2022 with limited buyer interest and likely negotiable price. Asking price of USD 2,867 per sqm against an estimated negotiated range of USD 2,049 to USD 2,458 per sqm given the time on market. The only full building available for purchase within the immediate metro-adjacent corporate corridor.	Whole-building control at a per-sqm price that currently buys a single office floor in the same corridor, because the listing has aged four years without institutional distribution. The seller has limited marketing exposure and no visible urgency; a negotiation to USD 2.0M to USD 2.5M would place the full-building premium at near zero versus fractional office purchases nearby.
Art Deco Commercial Building with Conversion Potential SALE	USD 3M – USD 5M	Chacao Municipality, East Caracas (adjacent to metro station)	Nine-story art deco building with 6,345 sqm of habitable space across 49 units (6 retail, 13 offices, 30 mixed-use), at Caracas's highest-footfall transit node adjacent to a metro station. Listed since December 2022 with no transaction in more than three years; asking price of USD 4.5M subject to negotiation. Pricing runs USD 400 to USD 550 per sqm at negotiated range, against USD 1,000 to USD 3,200 per sqm for completed buildings in prime East Caracas. Art deco facade from the 1930s to 1950s, a finite architectural resource with global conversion precedents (hotel, coworking, headquarters).	A 49-unit income-producing building trading at 30% to 55% of comparable per-sqm prices in the same municipality, priced by seller fatigue rather than fundamentals. The unit layout (78 to 113 sqm per unit) fits boutique hotel conversion without structural changes, in a city with zero character-driven boutique hotels.

REAL ESTATE · CONTINUED

OPPORTUNITY	ESTIMATED INVESTMENT	LOCATION	OPPORTUNITY DESCRIPTION	INVESTMENT THESIS
Corporate Tower in the Financial District SALE	USD 12M – USD 18M	El Rosal, Caracas financial district	Fifteen-story corporate tower built in 2007, with three elevators, central HVAC, backup generators, fire suppression system, executive-grade upper floors, and rooftop terrace, in Caracas's established financial center. Currently occupied with operational staff in common areas. Pricing equates to USD 1M per floor across 15 levels; asking price of USD 15M dates from November 2023, before the January 2026 political transition. Three basement parking levels and autonomous power and water infrastructure eliminate dependence on Caracas's intermittent public utilities.	Turnkey Class A tower priced off a pre-transition 2023 listing, with autonomous power, water, and climate systems that eliminate the infrastructure gap constraining most Caracas office stock. Offshore fund inquiries have already reached the listing broker, providing pre-existing demand ahead of formal marketing.
Office Building with Full Services Autonomy SALE	USD 2.5M – USD 3.5M	East Caracas corporate-industrial corridor	Five-level corporate-industrial building with 5,672 sqm of construction on 3,700 sqm of land (four parcels, two undeveloped), 250 KVA backup generator, 70-meter deep well producing 3 liters/second, more than 80 parking spaces, and dual vehicular access. Currently occupied by an operating business, with functioning systems and well-maintained condition. Pricing works out to USD 511 per sqm of construction, against USD 1,676 per sqm for a comparable new commercial building in the adjacent premium district. Sits alongside major Venezuelan and international corporate campuses on the same corridor.	Full services autonomy (own power and water) eliminates the infrastructure risk that drives tenant decisions in Caracas, yet the building trades at 30% of the per-sqm price of newer buildings in adjacent districts. Two undeveloped parcels (570 sqm combined) provide expansion capacity that the current price does not reflect.
Office Tower at Structure and Facade Stage SALE OR JOINT VENTURE	Negotiable	Eastern Financial District, Caracas	Twenty-story tower with 14,634 sqm built (expandable to 16,499 sqm), 5,148 sqm of office space, seven floors of parking (7,270 sqm), and a completed structure with glass-aluminum curtain wall facade, directly facing a major metro station. Construction halted more than 15 years ago after the original developer was intervened; the building remains in grey-shell condition. Estimated completion cost runs USD 103 to USD 207 per sqm of office floor, against USD 450 to USD 650 per sqm for new-build office construction in Venezuela. The only office tower available at structure stage with zero-distance metro access in Caracas.	A structurally complete 20-story tower at the city's primary transit hub, acquirable from a distressed seller and finishable for an estimated USD 1.5M to USD 3.0M, delivering 5,148 sqm of leasable office space in a market with near-zero vacant alternatives. Seller openness to joint venture structures alongside outright sale widens the buyer universe to include capital-constrained operators.

REAL ESTATE · CONTINUED

OPPORTUNITY	ESTIMATED INVESTMENT	LOCATION	OPPORTUNITY DESCRIPTION	INVESTMENT THESIS
Luxury Residential Development at Completion Stage SALE	USD 6M – USD 9M	Punta Cana, Dominican Republic	Three-phase residential development on 5.86 hectares within Punta Cana's premier master-planned community (USD 1.9B in cumulative institutional investment, multiple international hotel brands present), adjacent to a Jack Nicklaus golf course inaugurated in November 2025. Phase 1 registers 72% absorption: 49 of 68 bungalows pre-sold, with USD 7M in receivables pending collection; Phases 2 and 3 project 96 condominiums and 16 premium lots for more than USD 44M in projected gross revenue. Pricing works out to USD 450,000 per three-bedroom bungalow, against USD 480,000 to USD 516,000 for comparable villas in the same development. A USD 5M bank debt maturity creates seller urgency independent of market conditions.	The USD 7M in pending receivables effectively offset the USD 7.5M asking price, leaving Phases 2 and 3 (USD 44M-plus in projected revenue) as near-zero-cost optionality for a buyer who can complete construction. The distress is operational (contractor abandonment), not market-driven; comparable villa inventory in the same community has sold at higher price points throughout 2025.
Sustainability-Certified Corporate Office Tower SALE OR LEASE	USD 70M – USD 90M	East Caracas	Twenty-five-story corporate tower with 29,510 sqm of rentable area, 16 office floors, triplex penthouse with terraces, 720 parking spaces across eight levels, 12 high-speed elevators, and a 160-seat auditorium, owned by a major Venezuelan conglomerate. First building in Venezuela to obtain EDGE Core and Shell certification (IFC/World Bank, November 2024); pre-certified LEED Silver, with LEED O+M in process. Listed lease rate of USD 12 per sqm/month implies USD 4.25M in annual gross potential, yielding USD 25M to USD 37M at 8% to 10% cap rates against a USD 80M asking price. Pedestrian access to a metro station and direct highway connection.	The published lease rate implies a valuation 2x to 3x below the asking price, leaving room for compression; the building is actively marketed for lease, a condition a buyer could lock in before closing. Dual EDGE and LEED certifications make this the only institutionally presentable Class A space in Caracas for multinational tenants with ESG requirements.

INVESTMENT VERTICAL

Healthcare

Clinical operations, specialty centers, and healthcare platforms with accumulated regulatory standing.

OPPORTUNITY	ESTIMATED INVESTMENT	LOCATION	OPPORTUNITY DESCRIPTION	INVESTMENT THESIS
Precision Medicine Company with Dual Business Model CAPITAL RAISE	USD 600K – USD 800K	Caracas, Venezuela	Clinical genomics laboratory targeting the 63,000 annual cancer cases currently processed abroad. Breakeven sits at 10 to 12 monthly tests, backed by a signed hospital alliance covering more than 300 oncology cases per year. Pricing of USD 3,000 per test with 14-day turnaround compares with USD 5,000-plus and 45-plus days in the international market. Leadership team holds prior experience at top-tier global institutions in genomics and pharmaceutical research.	A signed hospital alliance and a USD 400K-plus equipment barrier establish a first-mover position in a market where zero genomic tests are processed domestically; entry is at a USD 2.9M pre-money valuation with breakeven within reach of a single institutional partner. Each test generates clinical revenue at 53% gross margin plus a proprietary genomic data point, building a dual-value asset from day one.
Private Medical Complex with Accessible Healthcare Model CAPITAL RAISE	USD 20M – USD 38M	Caracas, Venezuela	Medical complex covering 24,000 sqm on 1.5 hectares, with more than 50 specialties, three campuses, and 10 CT scanners. 16 years of continuous operation, with reported revenue of USD 2M-plus per month and 250 surgeries per month (2021 data, pending verification). Pricing of USD 833 per sqm of built medical infrastructure compares with USD 3,000 to USD 5,000 per sqm to build an equivalent facility from scratch. Positioned as the only large-scale accessible private healthcare platform in Venezuela, filling the gap between collapsed public hospitals and premium clinics.	IFC invested USD 112M in Auna (2025) on the same accessible-healthcare-platform model targeting underserved Latin American markets; this complex operates the same model in the region's least-served country. The 24,000 sqm of built infrastructure and 16-year operating history would take more than five years and multiples of the asking price to replicate.
Wholesale Pharmaceutical Distributor SALE	USD 1.5M – USD 3M (business only) or USD 5M – USD 7.5M (with real estate)	Caracas, Venezuela	Pharmaceutical distributor with 12 product lines, a 4,374 sqm industrial facility, four loading docks, and cold storage. More than 40 years of continuous operation, serving 300 recurring clients across a national network of 6,000 pharmacies. Business-only pricing of USD 1.5M (licenses, 300 clients, supplier network) compares with USD 2M to USD 3M and 12 to 18 months to assemble equivalent regulatory clearances and client relationships from scratch. One of roughly 32 registered wholesale drugstores in Venezuela, with active psychotropic substance distribution permits.	Psychotropic licenses and MPPS regulatory approvals require years of compliance history that no capital can compress; the transaction captures four decades of accumulated regulatory standing on day one. Cobeca and Nena acquired 40 Farmahorro locations in August 2025 at higher multiples, confirming recent transactional activity in the channel; only 32 registered wholesalers serve 6,000 pharmacies nationwide.

HEALTHCARE · CONTINUED

OPPORTUNITY	ESTIMATED INVESTMENT	LOCATION	OPPORTUNITY DESCRIPTION	INVESTMENT THESIS
Purpose-Built Geriatric Center SALE	USD 1M – USD 1.2M	Premium residential zone, southeast Caracas	Purpose-built geriatric facility with 18 rooms, industrial kitchen and laundry, accessibility ramps, and adapted bathrooms, on 1,200 sqm of land with 900 sqm constructed. Construction at 90% completion with all permits reported as approved; ready for fit-out. Pricing works out to USD 944 per sqm of built area (including land), within the USD 600 to USD 1,200 per sqm range for residential land alone in the same district. Designed from the ground up for geriatric use, in a market where the leading operator in the same area has run from converted residential houses for more than 35 years.	A competitor has operated profitably in the same neighborhood since 1987, with sustained demand for formal senior care at this location; this facility eliminates the two- to three-year construction timeline and delivers a ready-to-operate platform at replacement cost. The seller cites health reasons and the listing has been active for more than a year, opening negotiation room below an already modest asking price.
Hospital Complex with Medical Offices Tower SALE	USD 12M – USD 20M	North-central Caracas	Hospital and 14-floor medical offices tower totaling roughly 6,000 sqm, with 3 operating rooms, a 4-bed ICU, hemodynamics suite, 2 GE 1.5T MRI units, and a multislice CT scanner. More than 30 active specialties across two integrated entities (hospital plus ambulatory services), with 24 private rooms and 48-hour generator autonomy. Pricing works out to USD 2,667 per sqm at asking price, against a secondary-market reference of USD 1.3M to USD 3.3M for the diagnostic imaging equipment alone. The dual-entity structure (hospital for complex procedures, 14-floor tower for outpatient referrals) generates a self-feeding patient ecosystem.	The installed diagnostic capacity (two MRI units, hemodynamics, multislice CT) would take more than three years to permit, import, and calibrate in Venezuela; the buyer bypasses the entire procurement cycle. Two private equity firms with healthcare mandates closed acquisitions in Caracas in 2025, placing active institutional capital in the same market and price range as this asset.
Fully Equipped Private Hospital in Premium District SALE	USD 20M – USD 40M	Premium East Caracas	Private hospital on a 1,135 sqm corner lot with 2,906 sqm of built area across six levels, including 3 operating rooms, a 5-bed ICU, a 14-cubicle ER, full imaging suite, generator, and water reserve exceeding 100,000 liters. More than 60 years of continuous operation, with 500 affiliated physicians, more than 220 employees, and 24/7 service. The corner parcel values at USD 900 to USD 1,200 per sqm for residential use in the same district, setting a floor of USD 1M to USD 1.4M before accounting for 2,906 sqm of medical construction and equipment. A future metro station approved three blocks away will expand the patient catchment area; no competing hospital operates in the immediate zone.	The 500-physician referral network has generated continuous patient flow through 60 years of political and economic disruption; replacing an equivalent cross-referring specialist base takes more than a decade. A future metro station three blocks away and the January 2026 government-private clinic alliance are channeling net new patient flow to privately operated facilities in premium Caracas zones.

Mining

Mineral assets newly accessible following the 2026 legalization of private gold mining.

OPPORTUNITY	ESTIMATED INVESTMENT	LOCATION	OPPORTUNITY DESCRIPTION	INVESTMENT THESIS
Private Property with Gold Mining Potential JOINT VENTURE (FARM-IN)	USD 15M – USD 150M (phased across exploration stages)	Southern Bolivar State, Orinoco Mining Arc	Roughly 6,000 hectares of privately held land within the Orinoco Mining Arc. A 2018 technical study covering just 25 hectares (0.4% of total area) confirmed gold and diamond presence; the remaining 5,975 hectares remain unexplored. No diamond drilling, laboratory assays, or NI 43-101/JORC certification has been performed; geological and satellite data exist for the broader property. Entry starts at USD 2M to USD 3M for the first exploration gate. One of the few known private landholdings with mineral indicators inside the mining arc, removing the need for direct state negotiation over the land.	Venezuela's Ley Organica de Minas, promulgated unanimously on April 9, 2026, legalized private gold mining for the first time in 25 years, opening a regulatory window before the market reprices mineral assets. Global average discovery cost runs USD 62 per ounce, and comparable Guiana Shield projects have traded at C\$50M to C\$3B after systematic exploration; Gold Reserve returned with USD 75M in February 2026 and Gold Fields committed more than C\$60M to the same formation in Suriname, placing two well-capitalized miners in active pursuit of this type of greenstone belt exposure.

HOW TO PROCEED

From interest to closing.

01 Identify opportunities of interest

Select the assets in this overview that match your mandate by vertical, ticket size, or transaction type.

02 Execute a bilateral NDA with T3 Advisors

T3 provides a mutual non-disclosure and non-circumvention agreement covering all parties in the process.

03 Receive the full dossier

Upon signing, we deliver asset identity, precise location, financial documentation, technical studies, and transaction structure.

04 Conduct due diligence

Legal, financial, and technical review coordinated with our strategic partner network: OFAC counsel, local attorneys, auditors, appraisers.

05 Transaction structuring and closing

T3 coordinates the transaction from term sheet through signing, including escrow, regulatory approvals, and closing logistics.
